Taha Pourhassani

Computer Engineer | Generative AI & Visual Media Producer

E-Mail Address: pourhasani80@gmail.com

Linkedin: linkedin.com/tahapourhassani

Portfolio: tahapourhassani.github.io

Based in: Paris, France

PROFILE

Computer Engineering graduate and current master's student in Telecommunication and Network, combining technical project work with AI-assisted visual storytelling. Experience spans social media content, AI-assisted Instagram reels, outdoor billboard design, and technical projects.

EXPERIENCE

Digital Content Producer and AI Content Creator

ASA Advertising Agency | 2025-2026

Created social media content within an agency serving more than 20 clients across various industries.

Produced social media posts and Instagram reels, including AI-assisted content.
Designed large-format billboards displayed around the city.

Internship

Ata Varagh Azarbaijan, Tabriz, Iran | 2024

Internship involving an online examination system.

EDUCATION

Master's in Telecommunication and Network (M1)

Le Cnam, Paris, France | September 2026 - September 2027 (expected)

B.Sc. Computer Engineering - Information Technology

Islamic Azad University, Tabriz, Iran | 2020-2025

SKILLS

Programming: Python; C for AVR projects. Familiarity with C++ and C#.
Web and data: WordPress theme editing, plugins and content design; MySQL.
Creative: AI image and video generation for social media and content creation.
Tools: VS Code, Navicat, Cisco Packet Tracer, CodeVision, Proteus, Microsoft Office; basic Adobe Photoshop.

LANGUAGES

Languages:

Persian and Turkish: Native.

English: Fluent (IELTS Academic 6.5)

German: A2

FINAL ACADEMIC PROJECT

Biomedical NLP for Cancer Research

Final academic project | Recognised as a top project

Studied and presented a Microsoft/Miroculus case study on extracting miRNA-gene relationships from biomedical literature. Explained distant supervision, text features and logistic regression, and discussed the cited study's findings. Recognised as a top project by the Head of Computer Engineering at Islamic Azad University, Tabriz. Contribution: research synthesis and presentation of the existing study’s methods and findings.

ENGINEERING PROJECTS

AVR Microcontroller Systems

Course project | C, CodeVision, Proteus

Developed and simulated control systems including temperature sensing, traffic lights, clocks, timers and a digital door lock.

Warehouse Management System

Class project | Python

Built a system for tracking inventory and orders, with a simple database schema and features for querying and updating stock.

Round-Trip Time Measurement Tool

Class project | Python sockets

Created a client-server tool to measure response times and explore network latency.

Proxy Server

Personal project | Python sockets

Developed a basic proxy server with request filtering and logging.

LEADERSHIP

Head of Computer Engineering Scientific Association

Islamic Azad University, Tabriz | 2023-2025

Organised student workshops, seminars and academic events; coordinated student teams and communications.

HONORS AND RECOGNITION

Selected University Representative - 11th RINOTEX Technology Exhibition

Islamic Azad University, Tabriz

Selected to represent the university at the 11th RINOTEX Technology Exhibition.
